## 2018 Symposium Photography Schedule

Class	Description
1 Carbon	<p>Carbon is a solid non-metal element. Pure carbon can exist in two very different forms - diamond and graphite.</p> <p><b>Black and white photo highlighting something from nature that contains carbon.</b></p>
2 Hydrogen	<p>Mixed with oxygen = H<sub>2</sub>O.</p> <p><b>Color photograph with water as the main feature.</b></p>
3 Nitrogen	<p>The necessity of plant life existence, nitrogen provides our plants with sustainability.</p> <p><b>Color photograph of an agriculture landscape.</b></p>
4 Oxygen	<p>Air is colorless, odorless, tasteless, gaseous mixture of Oxygen and nitrogen.</p> <p><b>A color photo showing your interpretation of the air around us.</b></p>
5 Phosphorus	<p>The first form of elemental phosphorus that was produced (white phosphorus, in 1669) emits a faint glow when exposed to oxygen.</p> <p><b>An abstract color photograph highlighting the glow of a sunset or sunrise. (An abstract photograph focuses on shape, form, color, pattern and texture. It seeks to show the subject's essence, not reality.)</b></p>
6 Sulfur	<p>Sulfur is a non-metallic bright yellow solid. It has been known since antiquity, being the brimstone found in the Bible.</p> <p><b>A close-up photograph of a yellow flower.</b></p>
